MANUFACTURING STATISTICS HERE

Director Durand Has Special Report on Hawaiian Industry Prepared.

The last mail brought from Washington the results of Director Clark's special manufacturing census of Hawaii made at the time of the other enumerations in April. The report, specially prepared by order of Director Durand, consists of the totals for several leading industries, for all other industries, and for all industries combined, prepared under the direction of William M. Stewart, chief statistician for manufacturing, bureau of the census. A supplementary table gives the totals for steam foundries. The reason for a separate presentation for steam foundries is that this industry, which was canvassed for the first time in the thirteenth census, would, if included in the totals for the islands in 1910, render them unsuitable for comparison with the prior census.

The islands were not included in the census of manufactures for 1905 because that census was confined to continental United States.

Importance of Industries.

The census of 1910 shows that the manufactures of the islands are increasing rapidly and now are of great importance. This is especially true of those manufactures which, for their materials, depend upon such agricultural products as sugar, rice, and pineapples.

The enumeration for 1910 included the neighborhood industries and the hand trades, but such establishments were excluded from the census of 1910. Reducing the totals for 1910 to a comparative basis with the census of 1910, it appears that during the ten years the number of establishments increased from 235 to 500, or 113 per cent. The capital invested increased from \$10,773,000 to \$21,950,000, or 103 per cent. The cost of the materials used increased from \$12,261,000 in 1900 to \$25,029,000, in 1910, or 109 per cent.

The amount paid in salaries and wages during the year 1909 was \$2,044,000 and in 1910, \$2,795,000, an increase of 37 per cent.

The miscellaneous expenses increased from \$776,000 to \$1,328,000, or 72 per cent.

The gross value of products for 1910 amounted to \$23,850,000 and for 1910, \$47,406,000, an increase of 103 per cent.

The value added by manufacture, which represents the difference between the materials used and the value of products, increased from \$11,125,000 to \$21,777,000, or 96 per cent.

The number of salaried people and wage earners employed increased from 4184 to 6498, or 55 per cent.

Sugar and Rice.

The statistics indicate that there is a large variety of industries fairly well established in the islands, but comparative figures are given in the preliminary statement for only two, the manufacture of sugar and the cleaning and polishing of rice. There were 120 establishments engaged in these two industries during the year 1910. Their capitalization amounted to \$15,745,000, or 62 per cent of the total capital for all industries. Their annual product was valued at \$25,180,000, or 81 per cent of the total for all establishments—the report goes on to say:

"The manufacture of sugar is by far the most important industry in the islands, representing 76 per cent of the total value of products in 1910 and 82 per cent in 1900. The decreasing proportion for sugar in 1910 indicates a larger growth in the general manufacture of the islands.

The number of establishments in 1910 was 49, as compared with 44 in 1900, an increase of 11 per cent. The capitalization increased from \$7,982,000 in 1900 to \$14,834,000 in 1910, or 86 per cent. The gross value of products increased from \$19,255,000 to \$25,930,000, or 35 per cent. The amount added by manufacturing processes increased from \$9,477,000 to \$17,485,000, or 84 per cent.

There were 11 establishments reported as engaged in cleaning and polishing rice in 1910, as compared with 74 in 1900. The capitalization of this industry increased from \$82,000 to \$273,000, or 333 per cent. Its gross products increased from \$66,000 to \$222,000, or 232 per cent.

Owing to the close relationship between the manufacturing and the agricultural industries, it is not difficult to obtain statistics which will relate to the number of persons employed in manufacturing as distinct from agricultural. Therefore, it is believed that some employees were reported by manufacturing establishments in 1910 who should properly have been assigned to agriculture. The figures, however, do show that there were 2754 salaried officials and wage earners employed in the manufacture of sugar, as compared with 2000 in 1910. In the new industry there were 101 reported in 1910 and 172 in 1910.

Canning Industry.

The statistics indicate a great development of the canning and preserving of fruits and vegetables since the islands were acquired by the United States. This industry, which for its materials represents the canning and preserving of products, was not reported at the census of 1900, but in a schedule of products of 1910, the gross value of products of these establishments was \$1,700,000 and they gave employment to 573 salaried people and wage earners.

NO MORE BATHTUBS FOR STEEL WORKERS

CHICAGO, November 24.—No more bathtubs will be installed in the houses to be built for the foreign workmen employed by the various subsidiary companies of the United States Steel corporation at Gary, Indiana. This is the effect that came from the big corporation yesterday.

"Three years ago," said a steel corporation official, "we erected sixty well appointed houses for foreign workmen and their families and placed bathtubs in each one. A year later a report was wanted from New York as to how they were taking to the tubs. As an inspection revealed the fact that in no instance was the bathtub ever used, but were being utilized as coal bins, etc., we decided it was best to omit the tubs."

RIVAL OF HOBBLE SKIRT.

LONDON, November 23.—The Arcadians, at the Shaftesbury Theater, were redressed for the third time a few days ago, when the most wonderful "creations" and forecasts of the winter's fashions were given.

It will be remembered that "The Arcadians" first introduced the "hobble" skirt to London, and now comes the very latest freak of fashion in the shape of the divided skirt, which will certainly cause far more sensation than even the hobble skirt's first public appearance, for it is more original and more daring in conception.

The first "divided skirt" costume is a coat and skirt of rose pink cloth, the skirt being cut on straight and narrow lines, with the "divided" piece at the end of the skirt. When sitting the skirt looks exactly like a narrow ordinary one, but when walking the divided skirt will resemble a miniature pair of trousers, merging into a skirt before the knees.

CHRISTMAS GOOD CHEER.

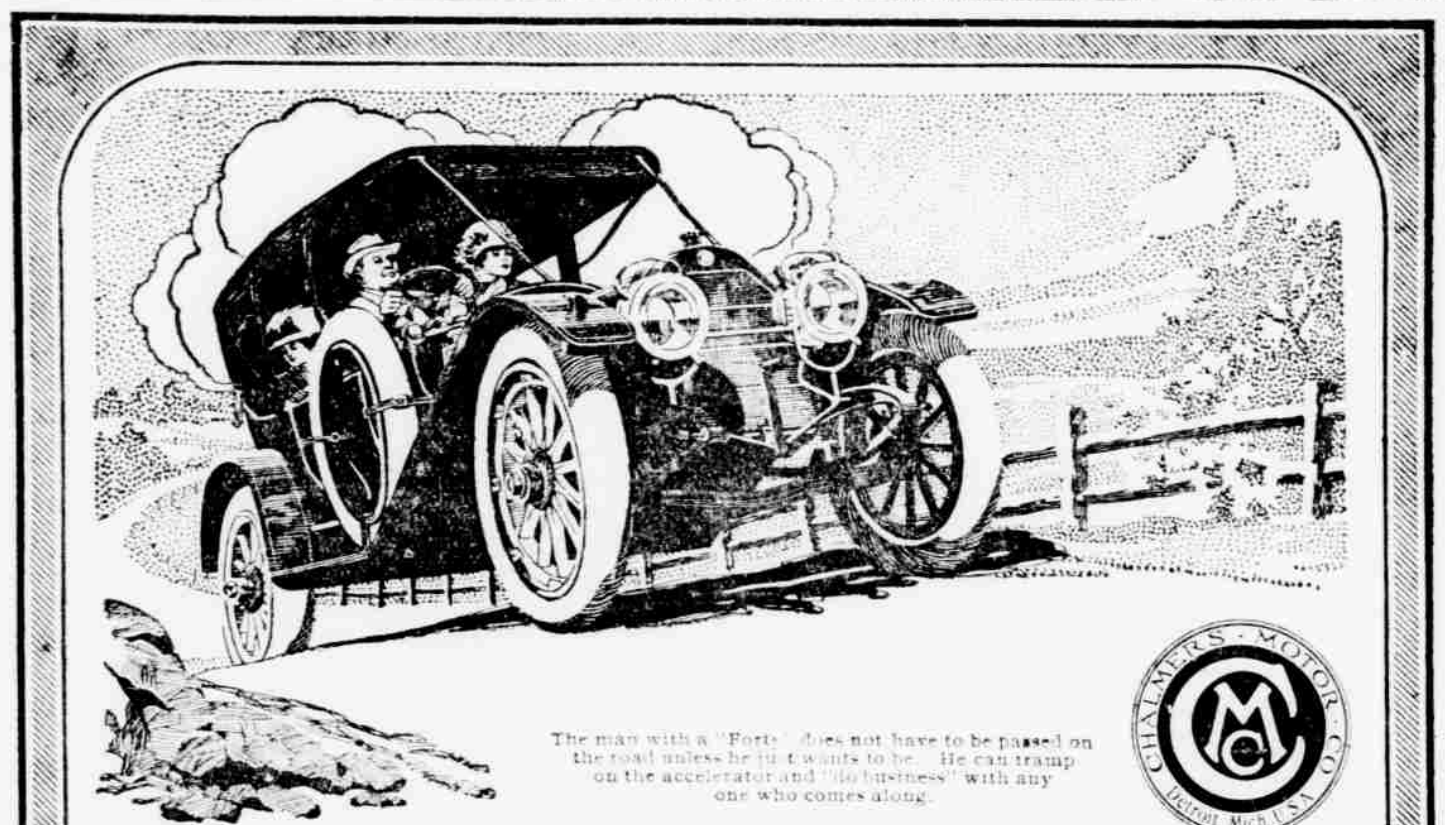

It has been said many times to me: "We are so glad we saw your ad. about the Hawaiian preserves; they are the very thing to send for Christmas."

I am making a special offering this year. A case of assorted preserves, well packed, for \$2.35, and will enclose cards, etc.

MRS. KEARNS,
471 Beretania avenue.

YOU WILL NOT

be deceived. That there are cheats and frauds in plenty everybody knows; but it is seldom or never that any large business house is guilty of them, no matter what line of trade it follows. There can be no permanent success of any kind based on dishonesty or deception. There never was, and never will be. The men who try that are simply fools and soon come to grief, as they deserve. Now many persons are, nevertheless, afraid to buy certain advertised articles lest they be humbugged and deluded; especially are they slow to place confidence in published statements of the merits of medicines. The effective modern remedy known as WAMPOL'S PREPARATION is as safe and genuine an article to purchase as flour, silk or cotton goods from the mills of manufacturers with a world-wide reputation. We could not afford to exaggerate its qualities or misrepresent it in the least; and it is not necessary. It is palatable as honey and contains all the curative properties of pure Cod Liver Oil, extracted by us from fresh cod livers, combined with the Compound Syrup of Hypophosphites and the Extracts of Malt and Wild Cherry and how valuable such a blending of these important medicinal agents must be to plain humanity. It is beyond price in Debility, Lung Troubles and Blood Impurities. Sufferers can furnish morning bottles—perhaps nothing so good. Dr. W. H. Duffe, of Canada, says: "I have used it in my practice and have pleasure in recommending it as a valuable tonic and reconstructive." It is a remedy that can afford to appeal to its record and represents the science and knowledge of bright and aggressive medical investigation. "The bottle convinces." At chemists.

This Car Is a Giant of Power

"He's got one of those Chalmers 'Forty's,' so there's no use racing with him."

That is what the driver of one of America's highest-priced, high-power cars—who was trying to leave a "Forty" behind on a fair Jersey road one day this summer said as the "Forty" poked its nose up alongside of him and started on past in spite of his wide-open throttle.

There is many an owner who has gone the limit in price, only to find that he did not have the limit in speed, hill-climbing ability and dogged endurance some day when a "Forty" poked its nose alongside of him.

You may not want high speed; you may not care for racing; you may never want to use all the power a "Forty" has; but there is a great satisfaction in feeling it there under you—vibrant, eager, willing, always on tap.

The man with a "Forty" does not have to be passed on the road, unless he just wants to be. He can tramp on the accelerator and "do business" with anyone who comes along.

The Chalmers "Forty" has also a striking beauty of line; it is as finely finished as any car made; it is comfortable for driver and passengers over all conditions of road; it has the quality to wear.

The Chalmers Company will make only 750 of this model this year, and our lot is limited. The price is \$2750, including Bosch magneto, Prest-O-Lite tank and gas lamps. We have a 1911 model on exhibition. We only ask for the privilege of showing it to you before you buy.
